Callbacks per month, FY2026

Basis: FY = Oct-Sep, months and FY by ERP Created date. Actual vs non-actual by fault code; non-actual = MISUSE, ROA, FIN, E13, E14. Callbacks not yet Processed have no fault code, so their type is predicted from the remarks (76 of the FY-to-date actuals are predicted). Attend time = CallDesk Ack to At-site, only for callbacks matched to CallDesk; target 40 min mantrap, 40 min non-mantrap (provisional). PM done = PM jobs done of those due.

Actual breakdowns per unit, FY2026 to date

267 of 1,821 units (14.7%) had more than 2 actual breakdowns so far this FY.

Check match: mantraps with response over 1 day, FY2026 to date (1)

Created	Callback	Unit	Jobsite	BU / zone	Response (min)
2026-08-16	505,175	U20126	Juniper Hotel	East - Hillside (ZONE 8)	2,467

Attend counts use only callbacks matched to CallDesk with an At-site time; unmatched callbacks are not counted as over target. Mantraps with a response over 1 day are likely matched to the wrong CallDesk ticket, so they are left out of the over-target counts, medians and zone tables above until the match is fixed (same rule as the dashboard).
